

Kabra Extrusiontechnik & Penta Systems India organize an interactive seminar for PVC & Profile Processors in southern & western region of India.

Seminar focuses on benefits of latest extrusion solutions and auto-feeding systems for PVC & Profile applications.

December 2015| Mumbai, India

Kabra Extrusiontechnik Ltd. (KET) & Penta Systems India hosted an interactive seminar focusing on benefits of extrusion solutions and auto-feeding systems for PVC & Profile applications. The seminar was attended by the leading processors in Western region of India and KET's esteemed customers.

The event started with a presentation by Mr. N B Shah (Sr. GM – Technical) who introduced audience to the latest extrusion solutions and new products developed & designed by KET's engineering team. Mr. Shah informed about new twinEX series of extruders, high speed twin & quadruple conduit lines for PVC, large diameter solEX series and high speed telecom micro-duct extrusion line offered by KET.

It was followed by a presentation by Mr. Renzo Magri (Business Head - Penta Systems India). Mr. Magri discussed various auto-feeding systems which can be employed in PVC & Profile Extrusion Lines. He focussed on the processor benefits offered by these systems. He emphasised that the auto-feeding systems offered by Penta are totally dust-free & maintenance-free, as opposed to the systems provided by other counterparts in the market. He mentioned that these systems come with key benefits like reliable hardware & software, repeatability – same formulation for every batch, consistent quality, and less human intervention – negligible scope for error. He also mentioned that, the joint venture company will closely work with processors to understand the formulations used and give optimum solutions for auto-feeding and material handling.

Audience found the seminar very fruitful and productive, especially the recommendations given by experts. For many of them, the products showcased were highly relevant and applicable to improve efficiency & material handling in today's scenario.

Mr. S. Shenoy, CEO – Kabra Extrusiontechnik, briefed the audience on the idea behind joint venture and informed about the structure of the Joint venture. He stated "Kolsite group is expecting growth in the coming years, at the same time we want to ensure that there is no compromise on quality & efficiency of the extrusion solutions." Talking about the joint venture he said "Prior to this joint venture which was signed in June 2015, KET's export team was closely working with Penta's team for auto-feeding systems and got very good response in export market, especially, Middle-east & Africa. So, we decided to replicate the same for processors in Asia."

"With Penta, we are bringing world-class auto-feeding systems to India, and we are confident that our customers will support us as they have supported us over the past five decades" expressed Mr. Sunil Ambekar (VP – Marketing, KET).

KET recently entered a JV with Penta S.r.l, Italy, in view of the same this seminar was an initiative to inform customers on benefits of auto-feeding systems for PVC & Profile pipe applications.
